SCALE FOR PROJECT MOBILE - 0 - BASIC OF THE MOBILE APPLICATION (/PROJECTS/MOBILE-0-BASIC-OF-THE-MOBILE-APPLICATION)

You should evaluate 1 student in this team

Git repository

`git@vogsphere.42malaga.com:vogsphere/intra-uuid-49f13424-563c-475f-8|` 

Introduction

- Remain polite, courteous, respectful, and constructive throughout the evaluation process.
The well-being of the community depends on it.

- Work together with the person (or group) being evaluated to identify any issues in their work.
Take the time to discuss and debate the problems you've identified.

- Remember that your peers may have interpreted the project instructions and scope differently than you. Keep an open mind and grade as honestly as possible.
Peer evaluation is only effective if taken seriously.

Guidelines

- Only evaluate the work present in the student or group's Git repository.

- Verify that the Git repository belongs to the correct student or group.
Ensure that the project is for the correct assignment, and that you clone the repository in an empty folder.

- Check carefully that no malicious aliases were used to deceive you into evaluating something other than the official repository's content.

- Make sure both the evaluator and the evaluated student(s) review any scripts used to facilitate grading to avoid any surprises.

- If the evaluating student hasn't completed the project yet, they are required to read the entire project description before starting the evaluation.

- Use the provided flags on this scale to report an empty repository, non-functional program, norm errors, cheating, etc.
In such cases, the final grade is 0 (or -42 in case of cheating).
However, except in cases of cheating, you are encouraged to discuss the work, even if incomplete, to help identify issues and avoid repeating the same mistakes in the future.

- Remember that during the evaluation, no segmentation faults or other unexpected program crashes should occur; otherwise, the final grade is 0.
Use the appropriate flag if this happens.

- You should not edit any files except the configuration file if one exists.
If you need to edit a file, make sure to explain the reasons to the evaluated student and reach an agreement with them.

- You must also check for memory leaks. Any memory allocated on the heap must be properly freed before the program terminates. You are allowed to use available tools like `leaks`, `valgrind`, or `e\_fence`. If memory leaks are found, use the appropriate flag.

Mandatory part

Exercise00 - Simple Page

For this exercise, you need to run the ex00 application.

You should see a text with a button below it, both centered horizontally and vertically.

☒ Yes

☐ No

Click Button

When the button is clicked, the message "Button pressed" should appear in the debug console.

☒ Yes

☐ No

Responsive Design

The page should be responsive. If you resize the window, rotate the phone to landscape mode, or switch to a different device, the text and button should resize correctly.

☒ Yes

☐ No

Exercise01 - Say Hello to the World

For this exercise, you need to run the ex01 application.

When you click the button, the text "Hello World!" should appear.

If you click the button again, the text should return to the initial message.

Each time you click the button, the text should toggle between the initial message and "Hello World!"

☒ Yes

☐ No

Exercise02 - AppBar

For this exercise, you need to run the ex02 application.

The application should display an AppBar at the top of the page with the title "Calculator".

☒ Yes

☐ No

Calculator

You should see two text fields:

- One to display the expression.
- One to display the result.

If no operation is performed, both fields should display "0".

☒ Yes☐ No

More Buttons

You should see the following:

- Number buttons from 0 to 9.
- Four operator buttons (+, -, *, /).
- One button "=" to calculate the expression.
- One button "AC" to reset the expression.
- One button "C" to delete the last character.

☒ Yes☐ No

Debug Console

When you click any button, its text should be displayed in the debug console.

☒ Yes☐ No

Responsive Design

The page should be responsive.

If you resize the window, rotate the phone to landscape mode, or switch to a different device, the text and button should resize correctly.

☒ Yes☐ No

Exercise03 - Basic Calculation

For this exercise, you need to run the calculator_app application.

You should be able to perform the following operations:

- Addition
- Subtraction
- Multiplication
- Division

You should be able to perform multiple operations in one expression (e.g., $1 + 2 * 3 - 5 / 2$).

The expression and the result should be displayed in the respective text fields.

☒ Yes☐ No

More Actions

You must be able to perform the following actions:

- Enter a negative number (by pressing the "-" button).
- Enter a decimal number (using the "." button).
- Delete the last character (using the "C" button).
- Clear the entire expression (using the "AC" button).

The expression and result should be displayed in the respective text fields.

☒ Yes☐ No

Error Handling

The following errors should be handled:

- Division by zero.
- Invalid expressions (for example: $1 + 2 +$).
- Very large numbers.

The application must NEVER crash!

✓ Yes

✕ No

Ratings

Don't forget to check the flag corresponding to the defense

✓ Ok

★ Outstanding project

Empty work

📌 Incomplete work

📄 Cheat

💥 Crash

⚠ Concerning situation

Conclusion
