SCALE FOR PROJECT MOBILE - 1 - STRUCTURE AND LOGIC (/PROJECTS/MOBILE-1-STRUCTURE-AND-LOGIC)

You should evaluate 1 student in this team

Git repository

`git@vogsphere.42malaga.com:vogsphere/intra-uuid-977d071e-1dfb-43f8-b` 

Introduction

- Remain polite, courteous, respectful, and constructive throughout the evaluation process.
The well-being of the community depends on it.

- Work with the person (or group) being evaluated to identify any issues in their work.
Take the time to discuss and debate the problems you have identified.

- Keep in mind that your peers may have interpreted the project instructions or functionality requirements differently. Always approach grading with an open mind and evaluate as honestly as possible. Peer evaluation is only effective if conducted seriously.

Guidelines

- Only grade the work found in the student or group's Git repository.

- Double-check that the Git repository belongs to the student or group.
Ensure that the work is for the relevant project, and verify that "git clone" is used in an empty folder.

- Carefully check for any malicious aliases that might mislead you into evaluating content other than the official repository.

- To avoid any surprises, ensure both the evaluator and the evaluated student(s) have reviewed any scripts used to facilitate the grading.

- If the evaluating student has not yet completed that particular project, it is mandatory for them to read the entire subject before starting the defense.

- Use the flags available on this scale to report an empty repository, a non-functional program, norm errors, cheating, etc. In such cases, the final grade is 0 (or -42 in the case of cheating). However, except for cheating cases, you are encouraged to continue discussing the work (even if incomplete) to help identify any issues and prevent similar mistakes in the future.

- Remember that during the defense, no segmentation faults, unexpected crashes, or premature program terminations are allowed. If any of these occur, the final grade is 0. Use the appropriate flag.

- You should never need to edit any file except the configuration file, if one exists.
If you want to edit a file, explain your reasons to the evaluated student and ensure both of you agree.

- You must also verify that no memory leaks are present. Any memory allocated on

the heap must be properly freed by the end of the program. You are allowed to use any tools available on the system, such as ``leaks``, ``valgrind``, or ``e_fence``. In the case of memory leaks, use the appropriate flag.

Mandatory part

For this evaluation, you need to run the ``weather_app`` application. A key aspect of this app is that it must be responsive. Therefore, ensure the app remains responsive throughout the evaluation.

Exercise00 - The Bottom Bar

- You should see a bottom bar with three tabs: "Currently", "Today", and "Weekly".
- Each tab has a name and an icon.
- The "Currently" tab should be selected by default when you start the app.

☒ Yes

☐ No

Tabs

You should be able to switch between the tabs by either clicking on them or by swiping left or right. Both methods should work.

☒ Yes

☐ No

Switching between tabs

When switching from one tab to another, the content of the tab should change. It should display text showing the name of the current tab.

☒ Yes

☐ No

Exercise01 - Top Bar

You should see a top bar with a search text field and a geolocation button.

☒ Yes

☐ No

Search text functionality

If you type text into the search text field and press enter, the app should display the tab name along with the entered text in all tabs.

☒ Yes

☐ No

Geolocation button

If you click the geolocation button, the app should display the tab name and the text "GeoLocation" in all tabs.

☒ Yes

☐ No

Search or Geolocation

You should never see both the search text and the geolocation text at the same time.

The application should always display the most recent search or location result across all tabs.

✓ Yes

✕ No

Ratings

Don't forget to check the flag corresponding to the defense

✓ Ok

★ Outstanding project

Empty work

📌 Incomplete work

📄 Cheat

💥 Crash
